EDUCATION

Drexel University

Philadelphia, PA

Bachelor of Science in Computer Science (Honors), Minor in Finance, GPA: 3.79

June 2029

Honors: OpenAI Dev Day 2026 Travel Full Scholarship; Dean's List (Winter 2026); Drexel STAR Scholar Research Grant (Summer 2025); First Place–Drexel IEEE Scratch Competition (Fall 2025); SemiFinalist–Asia-Pacific Code Olympiad (Summer 2023)

EXPERIENCE

Software Engineer

Malvern, PA

Keenova Therapeutics, IT Corporate Functions

April 2026 – Present

- Architected a production RAG chatbot on Azure over a merged company's SharePoint sites and proprietary documents, deploying an ML system into a regulated pharmaceutical environment as an enterprise AI assistant serving 1,600+ employees
- Executed cross-tenant migrations alongside 10+ SMEs, piloting my own domain migration first and recording every step with screenshots and visual walkthroughs to author 12+ enterprise-wide self-diagnosis support documents
- Converted 7+ enterprise cybersecurity, IT, compliance, and software-use documents into standardized master-control templates
- Implement a ServiceNow Virtual Agent powered by custom NLU intent-classification models to resolve and route user requests

Software Development Research Assistant

Philadelphia, PA

Computational Cognitive Neuroscience Lab, University of Pennsylvania

October 2025 – Present

- Develop a full-stack open-source neuroscience platform in React & Sanity, building RESTful API endpoints and dashboards that ingest and surface real-time behavioral telemetry for 30+ participants, per Figma design and stakeholder requirements
- Improved data accuracy 20% by conducting detailed code reviews, adhering to structured PR templates, automating validation to flag deviations, and aligning on technical walkthroughs in standup meetings to maintain high code reliability

Teaching Assistant – CS 570 Programming Foundations (Graduate-Level)

Philadelphia, PA

Drexel University

September 2025 – January 2026

- Mentored 30+ students in Python, OOP, Data structures & Algorithms via code reviews, improving their problem-solving
- Boosted comprehension with feedback, clarifying concepts and debugging challenging technical problems alongside students

Computational Simulation and Machine Learning Researcher

Philadelphia, PA

STAR Scholars Summer Research Program, Drexel University

June 2025 – August 2025

- Implemented a simulation mathematically modeling 100 virtual fruit flies' learning behaviors using a Go simulator and Python protocol scripts, engineering stimulus-timing logic, and time-series analysis tools to quantify behavioral performance
- Achieved 88–90% accuracy for first-order and 20–25% for second-order protocols, applying statistical analysis and visualization to benchmark model performance against quantitative data from published experimental studies

Applied Machine Learning Fellow

Remote

Vision-Text Feature Alignment for Action Recognition, Algorverse AI Research Program

June 2025 – December 2025

- Built and evaluated a video-understanding AI pipeline in Python combining two self-supervised representation models (V-JEPA2, DINO) to measure how motion and temporal cues improve action recognition beyond static single-frame images
- Benchmarked the system against leading vision-language models (LLaMA, NVILA) on the YouCook2 video dataset, analyzing per-class performance gaps to identify where models fail to distinguish fine-grained sequential actions

PROJECTS

Fixify – Agentic CI/CD Self-Healing Copilot

New York, NY

Full-Stack Developer, Shopify x Base44 Hackathon

August 2026

- Developed an AI agent (TypeScript, GitHub API, Vercel AI SDK) that repairs broken Shopify deployments, giving it tools to read failed build logs, browse the repository, and check recent commits to find the root cause and write a complete fix
- Shipped a React dashboard with a side-by-side broken-vs-fixed code viewer plus 10 backend services that scan connected repos every 5 minutes and open a GitHub pull request on approval, cutting recovery from hours of manual work to under 30 seconds

Airbnb Price Prediction Tool

Philadelphia, PA

AI/Machine Learning Fellow, Break Through Tech AI/ML Program

June 2026 - July 2026

- Built a Python (pandas, NumPy, scikit-learn, TensorFlow/Keras) classifier predicting high- vs. low-price listings across 28,000+ NYC Airbnb's dataset, cleaning messy data and engineering location, room-type, and size features to identify price drivers
- Reached 85% accuracy by training and comparing a logistic-regression model against a neural network, delivering a pricing guide that helps hosts price competitively and flag listings priced too high or too low

Banking System Application

Philadelphia, PA

Software Test Engineer – Java

September 2025 – December 2025

- Architected a command-driven banking system in Java with 3+ account types and 5+ transaction operations, applying object-oriented and modular design to separate validation from business logic under (TDD) test-driven development practices
- Achieved 98% line and 95% mutation coverage across 300+ JUnit test cases by building a GitLab CI/CD pipeline to execute unit, integration, and boundary scenarios automatically, improving reliability and failure handling on every commit

SKILLS

- Programming Languages: C, C#, C++, Java, JavaScript, Python, R, SQL, TypeScript
- Libraries/Frameworks: ASP.NET, Chart.js, Flask, Node.js, NumPy, OpenCV, PyTorch, Pandas, React, Sanity JS
- Tools: Azure, Cursor, Figma, Git, GitLab, IntelliJ, Jupyter, MongoDB, MySQL, Power BI, RStudio, ServiceNow, VSCode

LEADERSHIP & SERVICE

- **President**, Drexel Society of Computational Cognitive Neuroscience (September 2025 – Present)
- **Technical Support Specialist & Mentor**, Drexel TechServ (January 2025 – August 2025)
- **Analyst**, Drexel Consulting Group (August 2025 – December 2025)
- **User Interface Designer**, Drexel Society of Artificial Intelligence (May 2025 – July 2025)
